

## OtisLink™ Telemetry

Cloud-Based Remote Equipment Monitoring & Asset Visibility  
 OtisLink™ Telemetry provides secure, cloud-based monitoring of industrial safety equipment and remote assets. The system delivers real-time data and alarm notifications via web and mobile access, enabling 24/7 visibility and response.

OtisLink connects through wired or wireless communication and immediately notifies personnel of critical events via email and SMS text messaging.

### Key Features

#### Real-Time Monitoring & Alerts

- Live operational data with instant email and SMS notifications
- Visibility of gas levels, relay status, and equipment health

#### Secure Cloud Platform

- SSL-secured, encrypted remote access
- Reliable monitoring from any location

#### User & System Control

- Role-based user permissions
- Configurable alerts and escalation settings

#### Data & Reporting

- Historical trends and performance data
- Custom and scheduled reports with up to 5 years retention

#### Equipment Health Monitoring

- Sensor status and battery level monitoring
- Device communication and uptime tracking
